Read and understand this manual and all instructions before operating the DR 9.5 CHIPPER SHREDDER.

WARNING

Read and understand this manual and all instructions before operating the DR 9.5 CHIPPER SHREDDER.

Conventions used in this manual

⚠️ DANGER
This indicates a hazardous situation, which, if not avoided, will result in death or serious injury.

⚠️ WARNING
This indicates a hazardous situation, which, if not avoided, could result in death or serious injury.

⚠️ CAUTION
This indicates a hazardous situation, which, if not avoided, could result in minor or moderate injury.

NOTICE
This information is important in the proper use of your machine. Failure to follow this instruction could result in damage to your machine or property.

Serial Number and Order Number

A Serial Number is used to identify your machine and is located on the Serial Number Label on your machine. An Order Number is used to check and maintain your order history and is located on the packing slip. For your convenience and ready reference, enter the Serial Number and Order Number in the space provided on the front cover of this manual.

Additional Information and Potential Changes

DR Power Equipment reserves the right to discontinue, change, and improve its products at any time without notice or obligation to the purchaser. The descriptions and specifications contained in this manual were in effect at printing. Equipment described within this manual may be optional. Some illustrations may not be applicable to your machine.
Chapter 1: General Safety Rules

⚠️ WARNING ⚠️

Read this Safety & Operating Instructions Manual before you use the DR 9.5 Chipper Shredder. Become familiar with the operation, service, loading/unloading, and storage recommendations to ensure the best performance from your machine. If you have any questions or need assistance, please contact us at www.DRpower.com or call Toll-Free 1-800-DR-OWNER (376-9637) and one of our Technical Support Representatives will be happy to help you.

Labels

Your DR 9.5 Chipper Shredder carries prominent labels as reminders for its proper and safe use. Shown below are copies of all the Safety and Information labels that appear on the equipment. Take a moment to study them and make a note of their location on your Chipper Shredder as you set up and before you operate the unit. Replace damaged or missing Safety and Information labels immediately.

⚠️ DANGER ⚠️

AVOID SERIOUS INJURY OR DEATH
- READ and understand the operator’s manual and all labels before starting.
- NEVER run the engine without the blowback guards and discharge guard in place.
- Rotating cutting blades. KEEP hands and feet out of the inlet hopper/chute and KEEP hands and feet away from the discharge area when the engine is running.
- ALWAYS shut engine off, remove spark plug, and wait for all moving parts to stop before servicing or to clear a clog.
- KEEP bystanders, children, and pets at least 100 feet from the work area.
- ALWAYS wear safety glasses and gloves and AVOID loose fitting clothing when operating this machine.

#39282

⚠️ DANGER ⚠️

AVOID SERIOUS INJURY OR DEATH
- NEVER run the engine without the blowback guards and discharge guard in place.
- Rotating cutting blades. KEEP hands and feet out of the inlet hopper/chute and KEEP hands and feet away from the discharge area when the engine is running.
- ALWAYS shut engine off, remove spark plug, and wait for all moving parts to stop before servicing or to clear a clog.

#39283
Protecting Yourself and Those Around You

**WARNING**

This is a high-powered machine, with moving parts operating with high energy. You must operate the machine safely. Unsafe operation can create a number of hazards for you, as well as anyone else in the nearby area. This machine can crush, grind, cut, and sever parts of your body if they enter the inlet or discharge area of your Chipper Shredder. Always take the following precautions when using this machine:

- Keep in mind that the operator or user is responsible for accidents or hazards occurring to other people, their property, and themselves.
- Always wear protective goggles or safety glasses with side shields while using the Chipper Shredder to protect your eyes from possible thrown debris.
- Avoid wearing loose clothing or jewelry, which can catch on moving parts or the material fed into the Chipper Shredder.
- We recommend wearing gloves while using the Chipper Shredder. Be sure your gloves fit properly and do not have loose cuffs or drawstrings.
- Wear shoes with non-slip treads when using your Chipper Shredder. If you have safety shoes, we recommend wearing them. Do not use the machine while barefoot or wearing open sandals.
- Wear long pants while operating the Chipper Shredder.
- Use ear protectors or earplugs rated for at least 20 dba to protect your hearing.
- Keep bystanders at least 100 feet away from your work area. Stop the engine when another person or pet approaches.

Safety for Children and Pets

**WARNING**

Tragic accidents can occur if the operator is not alert to the presence of children and pets. Children are often attracted to the machine and the chipping/shredding activity. *Never* assume that children will remain where you last saw them. Always follow these precautions:

- Keep children and pets at least 100 feet from the working area and ensure they are under the watchful care of a responsible adult.
- Be alert and turn the machine off if children or pets enter the work area.
- Never allow children to operate the Chipper Shredder.

Safety with Gasoline - Powered Machines

**WARNING**

Gasoline is a highly flammable liquid. Gasoline also gives off flammable vapor that can be easily ignited and cause a fire or explosion. Never overlook the hazards of gasoline. Always follow these precautions:

- Never run the Engine in an enclosed area or without proper ventilation as the exhaust from the Engine contains carbon monoxide, which is an odorless, tasteless, and deadly poisonous gas.
- Store all fuel and oil in containers specifically designed and approved for this purpose and keep away from heat and open flame, and out of the reach of children.
- Replace rubber Fuel Lines and Grommets when worn or damaged and after 5 years of use.
- Fill the Gasoline Tank outdoors with the Engine off and allow the Engine to cool completely. Don't handle gasoline if you or anyone nearby is smoking, or if you’re near anything that could cause it to ignite or explode. Reinstall the Fuel Tank Cap and Fuel Container Cap securely.
- If you spill gasoline, do not attempt to start the Engine. Move the machine away from the area of the spill and avoid creating any source of ignition until the gas vapors have dissipated. Wipe up any spilled fuel to prevent a fire hazard and properly dispose of the waste.
WARNING

- To safely store, allow the Engine to cool completely before moving into any enclosure. Never store a machine that has gas in the tank, or a Fuel Container, near an open flame or spark such as a water heater, space heater, clothes dryer or furnace.
- Never make adjustments or repairs with the Engine running. Shut down the Engine, disconnect the Spark Plug wire, keeping it away from the Spark Plug to prevent accidental starting, wait 5 minutes before making adjustments or repairs.
- Never tamper with the Engine’s Governor setting. The Governor controls the maximum safe operation speed and protects the Engine. Over-speeding the Engine is dangerous and will cause damage to the Engine and to the other moving parts of the machine. If required, see your authorized dealer for Engine governor adjustments.
- Keep combustible substances away from the Engine when it is hot.
- Never cover the machine while the Muffler is still hot.
- Do not operate the Engine with the Air Cleaner or the Carburetor Air Intake Cover removed. Removal of such parts could create a fire hazard. Do not use flammable solutions to clean the Air Filter.
- The Muffler and Engine become very hot and can cause a severe burn; do not touch.

General Safety

WARNING

Operating this Chipper Shredder safely is necessary to prevent or minimize the risk of death or serious injury. Unsafe operation can create a number of hazards for you. Always take the following precautions when operating this machine:
- Your Chipper Shredder is a powerful tool, not a plaything. Exercise extreme caution at all times. The machine is designed to chip wood and shred most organic materials. Do not use it for any other purpose.
- Thoroughly inspect the area in which you will be working and remove all foreign objects. Look for rope, wire, etc., and remove these objects before chipping/shredding. Inserting these objects into the Chipper Shredder Hopper could damage the machine and/or cause injury.
- Know how to stop the Chipper Shredder quickly; see “Stopping the Engine” in Chapter 3.
- Never operate your unit on a slippery, wet, muddy, or icy surface. Exercise caution to avoid slipping or falling.
- See manufacturer’s instructions for proper operation and installation of accessories. Only use accessories approved by DR Power Equipment.
- Never use the machine without ensuring that all guards and shields are in place.
- Never, under any conditions, remove, bend, cut, fit, weld, or otherwise alter standard parts on the Chipper Shredder. This includes all shields and guards. Modifications to your machine could cause personal injuries and property damage and will void your warranty.
- Never use the machine with the Chipper Chute, Shredder Hopper, Blowback Guards, or Discharge Guard removed.
- Never place any part of your body in the Chipper Chute, Shredder Hopper, discharge opening, or near any moving part while the machine is running. Keep the area of discharge clear of anything that will obstruct a clear discharge. Wind can also change discharge direction, so be aware. If it becomes necessary to push material into the Chipper Chute or Shredder Hopper, use a small diameter stick, NOT YOUR HANDS.
- Keep your face and body back from the Chipper Chute and Shredder Hopper to avoid accidental bounce back of any material.
- Do not allow an accumulation of processed material to build up in the discharge area as this will prevent proper discharge and can result in kickback.
- Allow only one person to operate the Chipper Shredder at any time.
- Always operate the machine from the Operator Zone (see Figure 14 on page 12). Never pass or stand on the discharge side of the machine when the Engine is running or the Flywheel is turning.
- If the machine should start making an unusual noise or vibration, shut down the Engine, disconnect the Spark Plug Wire, keeping it away from the Spark Plug to prevent accidental starting, wait 5 minutes, then inspect for damage. Vibration is generally a warning of trouble. Check for damaged parts and clean, repair, and/or replace as necessary.
- Never tamper with safety devices. Check their proper operation regularly.
General Safety (continued)

**WARNING**

- Never try to pick up, move, or transport the machine while the Engine is running or the Flywheel is turning.
- For safe loading up ramps carefully PULL the machine with the Shredder Hopper hand holds. For safe unloading down ramps, guide the machine from behind with the hand holds so it goes down the ramps and you follow.
- Before performing any maintenance or inspection procedure on the Chipper Shredder, shut the Engine OFF, wait 5 minutes for machine to cool, remove the Spark Plug Wire keeping it away from the Spark Plug.
- Never allow people who do not understand and/or have not read this Safety and Operating Instructions Manual to use the Chipper Shredder. Allow only responsible individuals who are familiar with these rules of safe operation to use your machine.
- Never overload or attempt to Chip or Shred material beyond the manufacturer’s recommendation. Personal injury or damage to the machine could result.
- While using the Chipper Shredder, don’t hurry or take things for granted. When in doubt about the equipment or your surroundings, stop the machine and take the time to look things over.
- Never operate the machine when under the influence of alcohol, drugs, or medication.
- Use the machine only in daylight.
- Stay alert for hidden hazards or traffic.
- Keep all nuts and bolts tight and keep the equipment in good operating condition.

California Proposition 65

**WARNING**

California Proposition 65:

- Engine exhaust and some of its constituents are known to the State of California to cause cancer, birth defects, and other reproductive harm.
- This product contains or emits chemicals known to the State of California to cause cancer, birth defects, and other reproductive harm.

A Note to All Users

Under California, Washington, New Mexico law, and the laws of some other states, you are not permitted to operate an internal combustion engine using hydrocarbon fuels without an engine spark arrestor. This also applies to operation on US Forest Lands.

If you live in a location that requires a Spark Arrestor please call us at (800) 376-9637 and we will provide one free of charge.

Failure of the owner or operator to maintain their equipment in compliance with state regulations is a misdemeanor and may be in violation of other state and/or federal regulations. Contact your State Park Association or the appropriate state organization for specific information in your area.

No list of warnings and cautions can be all-inclusive. If situations occur that are not covered by this manual, the operator must apply common sense and operate this DR 9.5 Chipper Shredder in a safe manner. Contact us at www.DRpower.com or call Toll Free: 1-800-DR-OWNER (376-9637) for assistance.
Chapter 2: Setting Up The DR 9.5 Chipper Shredder

It may be helpful to familiarize yourself with the controls and features of your DR 9.5 Chipper Shredder as shown in Figure 1 before beginning these procedures. If you have any questions at all, please feel free to contact us at www.DRpower.com.

**DR 9.5 Chipper Shredder Controls and Features**

- Fuel Fill
- Muffler
- Air Filter
- Oil Fill
- Shredder Hopper
- Chipper Chute Guard
- Chipper Chute
- Discharge Deflector
- 9.5 FT-LBS Torque Briggs & Stratton Engine
- Throttle Lever
- Starter Handle
- Choke Lever
- Fuel Shut-Off Valve
- Electric Start Key Switch
- Electric Start Battery (Under Base)
- Oil Drain
- Pneumatic Tires

**Common Parts (Figure 4 and list below)**
- Shredder Hopper
- Chipper Chute
- Collection Bag
- Shredder Guard & Bracket Assembly
- Chipper Guard & Bracket Assembly
- Discharge Deflector

**Assembly**

**Tools needed:**
- 1/2" Wrench
- 5/32" Allen Wrench
- 7/16" Wrench
- 3/8" Wrench
- 2 X 4 Block (Electric Start Model)

**Attaching the Shredder Hopper and Hammermill Housing**

The Electric Start Power Unit does not come with the Leg installed. Therefore, a 2 X 4 Block will need to be positioned under the flange of the Flywheel Housing to hold it upright (Figure 5). The Manual Start Power Unit can be positioned upright onto the preinstalled Leg.

1. Remove the two shipping nuts that are temporarily securing the Hammermill Housing to the Power Unit using a 1/2" Wrench (Figure 6). Discard the nuts.

2. Position the larger end of the Shredder Hopper on a flat surface and set the Hammermill Housing over the Shredder Hopper (Figure 7). Secure with four 1/4-20 Button Head Screws on the inside and 1/4-20 Locknuts on the outside using a 5/32" Allen Wrench for the Screws and 7/16" Wrench for the Locknuts.

**Note:** Make sure the Locknuts installed in step 2 are on the outside and the Button Head Screws on the inside. Adjust the Shredder Hopper and Hammermill Housing as you tighten the hardware to make sure the back side of the Hopper is flush to the flange of the Housing.
3. Position the Hammermill Housing/Shredder Hopper Assembly onto the seven studs of the Flywheel Housing (Figure 8). The two studs at the back of the Shredder Hopper will go through slots in the Flywheel Housing Bracket (Figure 9).

4. Check the fit between the Hammermill Housing Flange to the Flywheel Housing (Figure 8). If there are any noticeable gaps, continue to step 5. If there are no noticeable gaps, go to step 6.

5. Remove the Hammermill Housing/Shredder Hopper Assembly, loosen the hardware installed in step 2 and adjust the Hammermill Housing and Shredder Hopper to align better with the Flywheel Housing. Retighten the hardware and return to step 3.

6. **Manual Start Model** - Secure the Hammermill Housing/Shredder Hopper Assembly with nine (seven in front and two in back) 5/16-18 Flange Locknuts using a 1/2” Wrench (Figure 8 and 9).

**Electric Start Model** –

*Note:* When installing the Hammermill Housing for the Electric Start model, do not install the two Locknuts where the Leg will be attached (Figure 10) until the machine can be tipped back and supported as described.

Secure the Hammermill Housing/Shredder Hopper Assembly with seven (five in front and two in back) 5/16-18 Flange Locknuts using a 1/2” Wrench (Figure 8 and 9).

Tip the machine back and support the Shredder Hopper with a Jack Stand under the Hopper (Figure 10).

Position the Leg onto the lower portion of the Hammermill Housing and secure the Leg with two 5/16-18 Flange Locknuts using a 1/2” Wrench.

7. Install the Shredder Hopper Guard and Bracket Assembly with three 1/4-20 Flange Locknuts using a 7/16” Wrench (Figure 11).
**Attaching the Chipper Chute:**

*Note:* In the next step the 1/4-20 Bolts and Locknuts are pre-installed on the Guard Assembly to keep the parts in the correct order.

1. Using a 7/16” on the Locknut and 3/8” wrench on the Bolt, remove a Locknut from one of the Chipper Chute Guard Bolts, position it in the Chipper Chute, and loosely reinstall the Locknut (*Figure 12*). Repeat for the second Locknut. Fully tighten both Locknuts.

2. Attach the Chipper Chute onto the Housing Studs and secure with three 5/16-18 Flange Locknuts using a 1/2” Wrench.

**Attaching the Discharge Deflector:**

1. Secure one side of the Discharge Deflector at the two mounting locations with 5/16-18 X .75 Bolts and .344” x .88” x .12” Washers using a 1/2” Wrench (*Figure 13*).

2. Fold the Discharge Deflector over and attach the other side as in step 1.

*Note:* Tighten the Bolts just until the rubber guard begins to deform. No need to over tighten.

---

**Adding Oil and Gasoline**

**NOTICE**

- You MUST add oil before starting the Engine. This machine is shipped without oil. Traces of oil may be in the reservoir from factory testing, but you MUST add oil before starting the Engine. Fill the reservoir slowly, checking the level frequently to avoid overfilling.

- To get an accurate reading when checking the oil level:
  - The Engine MUST be level.
  - Refer to the Engine Manual for detailed information before performing the following procedures.

<table>
<thead>
<tr>
<th>Engine Oil</th>
<th>SAE 30: above 50 degrees F; 10W-30: 10-90 degrees F; 5W-30: 30 degrees F or below</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fuel</td>
<td>Unleaded gasoline</td>
</tr>
</tbody>
</table>

*Note:* Use only the recommended high detergent Engine oil. Other types of oil could cause problems operating your machine. Please refer to your Engine Owner’s Manual for more detailed oil information.
1. Position the machine so the Engine is level. Remove the Oil Fill/Dipstick (Figure 14).
2. Initially add 12 oz. of the oil recommended by the Engine Manufacturer. Wait one minute for the oil to settle.
3. Check the Oil level on the Dipstick as described in the Engine Manual.
4. Continue adding a few ounces of oil at a time, rechecking the level until the oil reaches the full level as indicated in the Engine Manual. Be careful not to overfill.
5. Replace the Oil Fill/Dipstick when full.
6. Remove the Fuel Fill Cap and fill the Fuel Tank with fresh, unleaded gas (with a minimum of 85 Octane) to approximately 1" to 1-1/2" below the top of the Fill Neck to allow for Fuel expansion. Be careful not to overfill. Reinstall the Fuel Fill Cap before starting the Engine. See your Engine Owner’s Manual for more detailed information.

**Note:** To refill the Fuel Tank, turn the Engine OFF, and let the Engine cool at least five minutes before removing the Fuel Fill Cap.

### Check the Tire Pressure

**Tools Needed:**
- Tire Pressure Gauge
- Air Compressor or Hand Pump

1. Remove the Valve Stem Protective Cap (Figure 15) and check the Tire pressure with a Tire Pressure Gauge.
2. Check the manufacturers recommended pressure that is stamped on the side of the Tire.

**WARNING**

Do not over inflate the Tires. Inflate to the manufacturers recommended pressure.

3. If the pressure is too low, add air through the Valve Stem with an Air Compressor or Hand Pump.
4. Replace the Valve Stem Protective Cap when finished.

### Connect the Battery Wires (Electric Start Model)

**Tools Needed:**
- 1/2" Wrench

We ship all Electric-Starting Chipper/Shredders with the green negative Battery wire disconnected. This prevents the Battery from discharging during shipment. You must connect the Battery wire before using your machine.

1. Remove any protective Cap that may be on the Battery Terminals from shipping.
2. Remove the Bolts securing the Battery Strap using a 1/2" Wrench and carefully lower the Battery (Figure 16).
3. Connect the green Negative Wire to the Negative (black) Terminal.
4. Reinstall the Battery and Strap.
Chapter 3: Operating the DR 9.5 Chipper Shredder

This chapter covers the procedures for starting and stopping your new DR 9.5 Chipper Shredder and discusses basic operation features. It may be helpful to better familiarize yourself with the features of your Chipper Shredder by reviewing Figure 1 in Chapter 2 before beginning the steps outlined in this chapter.

**WARNING**

Read and understand the warnings listed in “Chapter 1 General Safety Rules” before operating this Chipper Shredder.

**Before Starting**
- Check the Oil and Fuel level every time you use the DR 9.5 Chipper Shredder.
- Ensure the Fuel Shut-Off Valve is moved to the right in its OPEN position (Figure 17).
- Check the Shredder Hopper, Chipper Chute, and Discharge Guard and remove any debris buildup from the machine as described in “To Free a Clog” on page 16.

**Starting the Engine (Manual Start Model)**

1. Move the Choke Control Lever to the left to the Choke position (Figure 17) (leave in the Run position to the right if the Engine is already warm).

2. Move the Throttle to the left, FAST position.

3. Grasp the Recoil Starter Handle and slowly pull until you feel resistance, then pull the cord rapidly to start the Engine. One or two pulls will usually start the Engine.

4. As the Engine warms up, slowly adjust the Choke to the right towards the Run position. Wait until the Engine runs smoothly before each Choke adjustment.

5. When the Engine is warmed up and running smoothly, ensure that the Choke is fully in the Run position to the right.

**Note:** The Throttle should always be fully to the left when Chipping/Shredding.

**Starting the Engine (Electric Start Model)**

1. Move the Choke Control Lever to the left to the Choke position (Figure 17) (leave in the Run position to the right if the Engine is already warm).

2. Move the Throttle to the left, FAST position.

3. Rotate Key to the Start position until the Engine starts, then release.

4. The Key will return to the Run position and the Engine will continue to run.

5. As the Engine warms up, slowly adjust the Choke to the right towards the Run position. Wait until the Engine runs smoothly before each Choke adjustment.

6. When the Engine is warmed up and running smoothly, ensure that the Choke is fully in the Run position to the right.

**Note:** The Throttle should always be fully to the left when Chipping/Shredding.
**Stopping the Engine (Manual Start Model)**

Move the Throttle Control Lever all the way to the right past the SLOW position to the “STOP” position (Figure 17).  

*Note:* Close the Fuel Shut-Off Valve when transporting or storing the DR 9.5 Chipper Shredder.

**Stopping the Engine (Electric Start Model)**

Turn the Key to the Stop position (Figure 17). Remove the Key for safety.  

*Note:* Close the Fuel Shut-Off Valve when transporting or storing the DR 9.5 Chipper Shredder.

**Before You Begin**

- Visually check the Chipper Knife for damage each time you use the machine.  
- ALWAYS operate the DR 9.5 Chipper Shredder from the Operator Zones (Figure 18).  
- When viewed from the Chipper Chute side the Flywheel turns in a clockwise direction.  
- NEVER assume you know where the Chipper Knife is. You do not know where it is.  
- ALWAYS stop the Engine when leaving the Operating Zone or when moving the machine.

**Using the Chipper Chute**

The Chipper Chute is designed to chip thicker materials that the Shredder Hopper isn’t designed to handle. The revolving Chipper Knife mounted on a Flywheel turns branches fed into the Chute into “chips”. The Chipper can chip twigs and branches ranging in size from 1/2” to 3” in diameter. Cut your materials into manageable lengths before feeding them into the Chipper Chute.

- The Chipper is not self-feeding. Hold onto and slowly feed material into the Chipper Chute while paying attention to the engine speed. Do not force material or allow material to be pulled too quickly into the Chipper.  
- Larger diameter hardwood or extremely hard knots may not process as well as other materials. Discard larger diameter or harder branch stubs before they become too short to control their feed rate.  
- Overloading the Chipper Chute will cause the Engine speed to decrease. If the Engine bogs down, stop feeding material into the Chipper Chute and wait until the Engine returns to full speed before continuing.  
- Your DR 9.5 Chipper Shredder can process dry or green material. Green material will process quicker and easier than dry material. Soft wood processes easier than hard wood.  
- If the machine does not chip well, the Chipper Knife may need sharpening or may need to be replaced.  
- It is best to trim off any side twigs from the main branch that you are chipping.  
- When chipping branches, sometimes a tail will remain at the end of a branch. To avoid this, rotate the branch while feeding it into the Chipper Chute. Rotating the branch as you feed it into the machine will improve chipping performance.  
- Use caution with small diameter green saplings and branches less than 1” in diameter. Chip these grouped or bundled together to provide support for each other. If the material is 1” or larger, feed only one at a time into the Chipper Chute.  
- NEVER allow processed material to build up within 3” of the Discharge opening. Move the DR 9.5 Chipper Shredder or the pile as needed. Failure to do so could result in unnecessary jamming of the machine.  
- To move a pile of processed material, first shut off the Engine, and use a spade, rake, or long handle tool; NEVER use your hands or feet!  
- Make sure the DR 9.5 Chipper Shredder finishes processing and discharging material before shutting the Engine off.

---

*DR® 9.5 Chipper Shredder*
The Hammers within the Shredding Chamber can tug suddenly at material fed into the Shredder Hopper. Do not hold on tightly to branches and vines, and do not feed material straight down into the Hopper with your arm pointing downward toward the opening. Instead, keep your arms parallel to the ground and several inches above the top edge of the Hopper.

**Using the Shredder Hopper**

The Shredder Hopper can process hard wood branches up to 1/2" in diameter and softer organic material up to 2-3/8" in diameter. You can shred most organic materials. A Guard (flap) is attached to the Hopper. You must push material past this flap (using a branch if necessary) in order to enter the main Shredding Chamber where revolving steel Hammers do the shredding.

- Due to the wide variety of materials that you can shred, and their very different physical characteristics, only feed limited quantities of any material into the Shredder Hopper at first. Increase the amount and length of material if you find that the material is processing without any difficulty. Your judgment and operator experience is very important.
- Be sure not to overload the machine by feeding too much material into the Hopper at one time. If you hear the speed of the Engine decreasing, stop feeding material into the machine at once. Do not resume feeding the machine until the Engine has returned to full speed.
- You can feed several small branches into the Shredder Hopper at once providing their combined diameter is less than 1/2". Cut branches so they are shorter than (3) feet to make them more manageable.
- Allow green materials to dry before processing or alternate processing and discharging green/wet materials with dry materials to avoid clogging. If wet materials begin to clog, shred a stick to clear the material through. The shredding capacity is 1/2" hard woody material. For clearing a clog, you can intermittently shred a larger stick up to 1" diameter.

Using the Collection Bag

An optional Collection Bag is provided with your machine.

1. Install the open end of the Collection Bag over the rubber Discharge Deflector and hook it onto the metal housing tabs above and below the Discharge Deflector (Figure 19).

2. Squeeze the Rope Lock and pull the Rope to cinch the Collection Bag tightly around the housing tabs then release the Rope Lock (Figure 20).

**Note:** Chip and shred as normal. Make sure to empty the Collection Bag before it is completely full.

To Free a Clog

**WARNING**

Before performing any maintenance procedure or inspection, stop the Engine, wait five (5) minutes to allow all parts to cool. Disconnect the Spark Plug Wire, keeping it away from the Spark Plug.

1. Remove any material left in the Chipper Chute and Shredder Hopper with a wooden stick.

2. Check the Discharge Opening for clogs. If it is clogged, clear it with a stick.

3. Start the machine and allow any remaining material to discharge.

4. If you have been shredding wet/green materials the clog may be near the shredder housing inlet. Shred a wood stick of up to 1” diameter to clear the clogged wet material.

5. If the clog does not clear repeat the above process.

6. Be certain the cutting chamber is clear before trying to process more material.
Chapter 4: Maintaining The DR 9.5 Chipper Shredder

Regular maintenance is the way to ensure the best performance and long life of your machine. Please refer to this manual and the Engine Manufacturer’s Owner’s Manual for maintenance procedures. Service intervals listed in the checklist below supersede those listed in the Engine Manufacturer’s Owner’s Manual.

⚠️ WARNING

Before performing any maintenance procedure or inspection, stop the Engine, wait five (5) minutes to allow all parts to cool. Disconnect the Spark Plug Wire, keeping it away from the Spark Plug.

Removing and Replacing the Engine Oil

Tools and Supplies Needed:
- 10mm Wrench
- Rags and approved Container (for waste oil)
- Small funnel
- Engine Oil (see your Engine Manual for Oil specifications)

**Note:** Drain the oil when the Engine is warm; warm oil drains quickly and completely.

7. Set the machine on a level surface, place a container between the wheels under the unit toward the right side, and remove the Oil Fill/Dipstick on the left side of the machine (Figure 21).

8. On the right side of the engine, use a 10mm Wrench to remove the Oil Drain Plug allowing the used oil to drain completely through the drain hole into an approved Waste Oil Container (Figure 22).

9. Replace the Oil Drain Plug, and refill with new oil (see “Adding Oil and Gasoline” on page 11).

**Note:** Be sure to use environmentally safe disposal procedures in the disposing of the used oil.
Greasing the Wheel Bearings

Tools and Supplies Needed:

- Grease Gun
- Lithium Grease
- Clean Cloth

1. Wipe all dirt, etc., from the Grease Fittings on both Wheels with a clean cloth (Figure 23).
2. Apply no more than three pumps of quality general-purpose lithium grease with a hand-pumped grease gun to the Grease Fitting on each Wheel.
Replacing the Chipper Knife

The DR 9.5 Chipper Shredder is shipped with a sharp Chipper Knife and depending upon material being chipped we’ve found it can remain acceptably sharp for 40 plus hours. When you notice diminished self-feeding, it is time to replace the knife. You may also choose to have the knife sharpened instead as described on the next page.

NOTICE: Electric Start Models-You will need to block underneath the electric start model to support the machine when the Leg is removed in step 1.

Tools and Supplies needed:

- 1/2" Wrench
- 1/2" Deep Socket
- 3/16" Allen Wrench
- Awl
- Gloves

1. Use a 1/2" Wrench to remove the nine Locknuts that secure the Hammermill Housing/Shredder Hopper Assembly (also the Leg for Electric Start Models) (Figure 24). Lift the Assembly off the machine.

2. Use a 1/2" Wrench to remove the three Locknuts that secure the Chipper Chute and lift it off the machine (Figure 25).

3. Rotate the Flywheel until the Locknut is visible through the Locknut Access Hole. (Figure 26).

4. Clean out the heads of the Allen Screws with an awl or sharp tool (Figure 27).

5. Insert a 3/16" Allen wrench into the head of the screw and a 1/2" Deep Socket on the Locknut through the Locknut Access Hole (Figure 26) and remove the Locknut and Screw.

Note: Take care not to drop the Allen Screw or Locknut into the machine.

6. Rotate the Hammer Mill Assembly until the outer Locknut is visible through the Locknut Access Cutout.

7. Repeat Steps 6 and 7 for the remaining Screw and Locknut.

8. Remove the dull or damaged Knife and visually inspect the Knife mounting area and be sure they are clean. Metal burrs may need filing so that the replacement Knife will be able to mount flush against the Flywheel.

9. Install a new or sharpened Knife and finger tighten the Allen Screws and Locknuts.

Note: New Allen Screws and Locknuts are provided with each new Chipper Knife.

10. Using a 3/16" Allen Wrench on the Screw and a 1/2" Deep Socket on the Locknut, tighten the hardware to secure the Chipper Knife.

11. Double-check both Screws for tightness one more time.

12. Reinstall the Chipper Hopper and Hammer Mill Housing/Shredder Hopper Assembly (also the Leg for Electric Start Models).

CONTACT US AT www.DRpower.com
**Knife Sharpening**

- You should never attempt to sharpen the Chipper Knife freehand; take the Knife to a machine shop for proper sharpening.
- It is extremely important to consistently maintain the 45-degree angle for proper performance.
- Excessive heat generated during the sharpening process will damage Knives and weaken the metal.
- How many times a Knife can be sharpened is determined by how much material needs to be taken off to sharpen or to compensate for dents or gouges.
- A new Chipper Knife has a 5/16" measurement between the short side bevel edge and the Knife mounting holes ([Figure 28](#)).

---

**Figure 28: New Knife**

- The knife should never be sharpened to the extent that more than 3/32" is taken off this measurement.
- Once this measurement is below 7/32" ([Figure 29](#)), or if you are unable to remove dents or gouges with these guidelines, replace the Knife.

---

**Figure 29: Sharpened Knife**
Maintaining the Shredder Hammers

When the hardened steel Hammers become dull or round on the cutting edge, they should be rotated or reversed.

**Note:** The four flat Hammers have four cutting edges and the four J Hammers have two that may be used before replacement is necessary. To reverse the Hammers, proceed as follows:

**Tools and Part Required**
- 1/2" Wrench
- 3/8" Wrench
- 5/32" Allen Wrench

1. Remove the Hammermill Housing/Shredder Hopper Assembly. See “Replacing the Chipper Knife” in this Chapter.
2. Use a 5/32" Allen Wrench and a 3/8" Wrench to remove the Screw and Locknut from one of the Short Spacers (*Figure 30*).
3. Remove the Hammer Shaft, Spacers and Hammers.
4. Flip the J Hammer and Flat Hammer 180 degrees making sure the order is correct (J Hammer outermost).

**Note:** Be sure you reinstall the Hammers and Spacers in exactly the same order that they were removed.
5. Reinstall the Screw and locknut through the Short Spacer and the Hammer Pin.
6. Repeat steps 2 through 4 for the other three sets of Hammers. Confirm that two of the J Hammers are facing out and the opposite two are facing in (*Figure 31*). Correct them if needed.
7. Reinstall the Hammer Mill Housing/Shredder Hopper Assembly.

**Flywheel Maintenance**

A Flywheel removal tool (part number 36522) is available through DR Power Equipment to allow easy removal of the flywheel (*Figure 31*). Please visit us at www.DRpower.com to order the tool.
Removing the Battery for Charging

Tools Needed:
- 1/2” Wrench

1. Remove the Bolts securing the Battery Strap using a 1/2” Wrench and carefully lower the Battery (Figure 32).
2. Disconnect the green Negative and red Positive Wires from the Battery Terminals.
3. Charge the Battery as described in “Charging the Battery” below.
4. When finished, reinstall the Positive and Negative Battery Wires.
5. Reinstall the Battery and Strap.

Battery Care (Electric-Start Models)

Proper care can extend the life of a Battery. Follow these recommendations to ensure best performance and long life:

- **Before charging the Battery**, observe its external appearance and keep it clean and dry. Never charge or use a Battery that shows cracks, changes shape, leaks, or is otherwise obviously damaged.

- **Do not allow the Battery to run down completely before charging.** Leaking the Battery discharged damages the Battery. If the machine is not used, charge the Battery every 4 to 6 weeks. Operate the Engine for at least 45 minutes to maintain proper Battery charge.

- Store an unused Battery in a dry environment with temperatures between +40°F (5°C) and +95°F (+35°C). Make sure the storage temperatures will never be outside of these limits. The lower the storage temperature is within the specified temperature, the better as the battery will discharge more slowly at lower temperatures.

- **Do not charge an already charged Battery.** In theory, you cannot overcharge our Battery with a trickle charger; however, when a Battery is fully charged and the charger is still on, it generates heat that could be harmful to the Battery. A fully charged Battery will read 12V-13.2V with a voltmeter.

- **Do not continue to crank the Engine when the Battery charge is low.**

- If the Battery begins to leak, avoid contact with the leaking acid. Place the damaged Battery in a plastic bag, then dispose of it properly.

**WARNING**

If battery acid does contact your skin or eyes, flush with cool water for at least 15 minutes and call a physician. If you ingest acid, call a physician immediately.

Charging the Battery

Operate the Engine for at least 45 minutes to maintain proper Battery charge. If the Battery loses its charge, you will need to use a trickle Charger (like the DR Battery Charger) to recharge it. The Charger should have an output of 12 volts at no more than 2 amps.

- At 1 amp, the Battery may need charging for as long as 48 hours.
- At 2 amps, the Battery may need charging for as long as 24 hours.

**Note:** Using the recoil starter and then running the Engine will not recharge a dead or significantly discharged Battery.

To connect a Battery Charger to your DR TRIMMER/MOWER, follow the steps listed below.

1. Detach the two Battery wires going to the Battery on your DR TRIMMER/MOWER.
2. Attach the Black (-) alligator clipped wire from the Charger Adapter to the Negative (-) terminal of the Battery, then attach the Red (+) alligator clipped wire to the Positive (+) Battery terminal.
3. Plug the Charger into a standard wall outlet.
• Typically, the Battery takes between 6 and 8 hours to fully charge. Do not leave the charger on the battery longer than 24 hours for a 2 amp charger, or 48 hours for a 1 amp charger as you could potentially damage the battery.

• You can charge the Battery many times. The Battery lasts longer if you charge it before it is fully drained. Keep it fully charged and at room temperature when not using your DR TRIMMER/MOWER.

• If the Battery does not hold its charge for very long under normal conditions or it simply won’t hold a charge, then replace it. You can purchase replacement Batteries directly from us.

**NOTICE**

When you are finished charging the battery, disconnect the charger from the outlet first, then disconnect the battery charger wires from the battery. If you leave the battery charger wires connected to the battery, the battery will discharge itself back into the charger.

**Disposing of the Battery Responsibly**

The Battery is a sealed lead-acid Battery. Recycle or dispose of it in an environmentally sound way.

• Do not dispose of a lead-acid Battery in a fire; the Battery may explode or leak.

• Do not dispose of a lead-acid Battery in your regular, household trash. Law in most areas prohibits incinerating, disposing in a landfill, or mixing a sealed lead-acid Battery with household trash.

**Recycling a Used Battery**

**NOTICE**

Please dispose of used batteries responsibly, according to your local hazardous materials regulations. Never throw away used batteries in your household trash.

Please dispose of your used Batteries responsibly by recycling them. Call your local Solid Waste Management District or your local waste handler to locate the collection site nearest you. Some collection sites recycle Batteries year-round; others collect them periodically.

You can also visit the Web site of Earth 911 for more information [www.earth911.com]. Once there, go to the “Find a Recycling Location” box and type “Lead-acid Batteries - Non-automotive” in the “Materials” box, and enter your zip code in the “Zip Code” box. The site will show a list of recycling centers located near you.

For a fee, you can recycle your Batteries with the International Metals Reclamation Company. Visit them at www.inmetco.com and click “Battery Recycling”; or contact them at One INMETCO Drive Ellwood City, PA 16117; Office (724) 758-5515; Fax (724) 758-2845; sales@inmetco.com

To learn more about hazardous waste recycling, visit the Web site for Battery Council International [www.batterycouncil.org] or for the Environmental Protection Agency [www.epa.gov].
**Chapter 5: Troubleshooting**

Most problems are easy to fix. Consult the Troubleshooting Table below for common problems and their solutions. If you continue to experience problems, contact us at www.DRpower.com or call toll-free 1-800-DR-OWNER (376-9637) for support.

**WARNING**

Shut down the Engine, remove the Spark Plug Wire, and wait 5 minutes before performing any maintenance procedure or inspection on the Chipper Shredder.

**Troubleshooting Table**

<table>
<thead>
<tr>
<th>SYMPTOM</th>
<th>POSSIBLE CAUSE</th>
</tr>
</thead>
</table>
| Recoil will not pull out or is difficult to pull. | ⇒ Remove un-processed material from the Chipper Chute and Shredder Hopper and remove any built-up debris in the Discharge opening.  
⇒ There may be an oil compression lock in the cylinder. Take out the Spark Plug; hold a rag over the Spark Plug hole and pull the Recoil Cord several times to blow out any oil in the Cylinder. Wipe off the Spark Plug and reinstall it.  
⇒ Check the Engine oil level; the Engine may be seized.  
⇒ The Recoil may be broken or jammed. Visit our website at www.DRpower.com. |
| The Engine will not start (manual starting). | ⇒ Check the oil and gas level.  
⇒ Make sure that the Fuel Shut-Off is in the ON position.  
⇒ Check that the Spark Plug Wire is attached.  
⇒ The Air Filter may be dirty; change it following the procedure in the Engine Owner’s Manual.  
⇒ The gas may be old; change it if necessary. Use a fuel stabilizer if you keep gas longer than one month.  
⇒ Check the Throttle and Choke settings, adjustment and travel.  
⇒ The Spark Plug may be dirty or cracked; change it if necessary. If it’s oily, leave it out, hold a rag over the Plug Hole and pull the Recoil Cord several times to blow out any oil in the Cylinder, then wipe off the Plug and reinstall it. Never use a cracked Spark Plug as serious damage could result.  
⇒ If your Engine still won’t start, visit our website at www.DRpower.com. |
| The Engine will not start (electric starting). | ⇒ Check the previous section (manual starting) for possible causes.  
⇒ Check the wire connections—especially the ground connection, the green wire coming from the Battery, where it connects to the Engine.  
⇒ The Battery should be charged. Check the voltage yourself or at a gas station. If it’s low, charge it with a 12-volt, 1 to 2 Amp trickle charger. If you don’t use your machine for at least 45 minutes at a time, the Battery may need to be periodically charged. See the Battery Care section in Chapter 4.  
⇒ If your Battery is charged and your DR still won’t start, visit us at www.DRpower.com or call 1-800-DR-OWNER (376-9637) for assistance. |
### Troubleshooting Table (Continued)

**Warning:**
Shut down the Engine, remove the Spark Plug Wire, and wait 5 minutes before performing any maintenance procedure or inspection on the Chipper Shredder.

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Possible Cause</th>
</tr>
</thead>
</table>
| The Engine lacks power or is not running smoothly. | ⇒ Make sure the Choke Lever is all the way to the RUN position (right).  
⇒ Make sure that the Throttle Lever is all the way to the left FAST (Rabbit) position.  
⇒ The Air Filter may be dirty; change it following the procedure in the Engine Owner’s Manual.  
⇒ The Spark Plug may be dirty or cracked; change it if necessary. If it’s oily, leave it out, hold a rag over the Plug Hole and pull the Recoil Cord several times to blow out any oil in the Cylinder, then wipe off the Plug and reinsert it. Never use a cracked Spark Plug as serious damage could result.  
⇒ The gas may be old; change it if necessary. Use a fuel stabilizer if you keep gas longer than one month.  
⇒ The Engine oil may be dirty. Change it if necessary.  
⇒ Check that the Cooling Fins are clean and free of debris. Clean as needed.  
⇒ If your Engine still lacks power, visit our website at www.DRpower.com. |
| Engine smokes.                               | ⇒ Check the oil level and adjust as needed.  
⇒ You may be operating the machine on too great an incline. The machine should be level.  
⇒ The Air Filter may be dirty; change it following the procedure in the Engine Owner’s Manual.  
⇒ You may be using the wrong oil - too light for the temperature. Refer to your Engine Owner’s Manual for detailed information.  
⇒ Check that the Cooling Fins are clean and free of debris. Clean as needed.  
⇒ If your Engine still smokes, visit our website at www.DRpower.com. |
| Shredding and chipping action seems too slow. | ⇒ Check for a dull or damaged Knife; sharpen or replace the Knife.                                                                                                                                               |
| The machine has excessive vibration.         | ⇒ Check for a dull or damaged Knife; sharpen or replace the Knife.  
⇒ The Hammermill is out of balance. Check for any missing or broken Hammers or Spacers; replace if necessary.  
⇒ The Knife may not be seated properly. Loosen the Knife mounting screws, reset the Knife, and tighten the screws.  
⇒ If your machine still exhibits excessive vibration, visit our website at www.DRpower.com. |
| When chipping, the branch seems to vibrate excessively and “hammers” my hands. | ⇒ The Knife is dull; sharpen or replace it.                                                                                                                                                                     |
| Debris builds up in the cutting chamber      | ⇒ Alternate shredding dry material with wet/green material.  
⇒ Shred a wood stick of up to 1" diameter to clean out the build-up.                                                                                                                                          |

2-Year Limited Warranty

Terms and Conditions

The DR® CHIPPER SHREDDER is warranted for two (2) years against defects in materials or workmanship when put to ordinary and normal consumer use; ninety (90) days for any other use.

For the purposes of all the above warranties, “ordinary and normal consumer use” refers to non-commercial residential use and does not include misuse, accidents or damage due to inadequate maintenance.

DR Power Equipment certifies that the DR® CHIPPER SHREDDER is fit for ordinary purposes for which a product of this type is used. DR Power Equipment however, limits the implied warranties of merchantability and fitness in duration to a period of two (2) years in consumer use, ninety (90) days for any other use.

The 2-Year Limited Warranty on the DR® CHIPPER SHREDDER starts on the date the machine ships from our factory. The 2-Year Limited Warranty is applicable only to the original owner.

The warranty holder is responsible for the performance of the required maintenance as defined by the manufacturer’s owner’s manuals. The warranty holder is responsible for replacement of normally wearing parts such as the Battery, knife, hammers, and hammer shafts. Attachments and accessories to the machine are not covered by this warranty.

During the warranty period, the warranty holder is responsible for the machine transportation charges, if required. During the warranty period, warranty parts will be shipped by standard method at no charge to the warranty holder. Expedited shipping of warranty parts is the responsibility of the warranty holder.

SOME STATES DO NOT ALLOW LIMITATIONS ON THE LENGTH OF IMPLIED WARRANTIES, SO THE ABOVE LIMITATIONS MAY NOT APPLY TO YOU.

DR Power Equipment shall not be liable under any circumstances for any incidental or consequential damages or expenses of any kind, including, but not limited to, cost of equipment rentals, loss of profit, or cost of hiring services to perform tasks normally performed by the DR® CHIPPER SHREDDER.

SOME STATES DO NOT ALLOW THE EXCLUSION OR LIMITATION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO THE ABOVE LIMITATIONS MAY NOT APPLY TO YOU.

THIS WARRANTY GIVES YOU SPECIFIC LEGAL RIGHTS, AND YOU ALSO HAVE OTHER RIGHTS, WHICH VARY FROM STATE TO STATE.
Daily Checklist for the DR 9.5 Chipper Shredder

To help maintain your DR 9.5 Chipper Shredder for optimum performance, we recommend you follow this checklist each time you use your Chipper Shredder.

[ ] Check the Engine oil and Fuel Tank level.
[ ] Check that Engine is clean of debris.
[ ] Remove any unprocessed material from the Chipper Chute and Shredder Hopper.
[ ] Check the general condition of the Chipper Shredder, e.g.; nuts, bolts, welds, etc.
[ ] Check Tire Pressure and wear.
[ ] Check the Chipper Knife for tightness, nicks and wear.
[ ] Check the Blowback Guards and Discharge Guard for wear and damage.

End of Season and Storage

[ ] Change the Engine oil.
[ ] Clean or replace the Air Filter.
[ ] Check the Chipper Knife and Hammers for nicks and wear.
[ ] Remove any debris wrapped around the Hammers/Spacers.
[ ] If your DR 9.5 Chipper Shredder will be idle for more than 30 days, we recommend using a gas stabilizer. This will prevent sediment from gumming up the Carburetor. If there is dirt or moisture in the gas or tank, remove it by draining the tank. Completely fill the tank with fresh, unleaded gas and add the appropriate amount of stabilizer or gasoline additive. Run the Engine for a short time to allow the additive to circulate. Close the Fuel Shut-Off Valve to prevent carburetor overflow and leakage.
[ ] Clean the exterior of the unit to remove all dirt, grease, and any other foreign material. To prevent rust, touch up painted surfaces that have been scratched or chipped.
[ ] Be sure all nuts, bolts, and screws are securely fastened.
[ ] Remove the Spark Plug and pour about 1 ounce of motor oil into the Cylinder hole. Replace the Plug and crank the Engine over a couple of times using the Pull Cord. This will coat the piston and seat the valves to prevent moisture buildup.
[ ] If possible, store the Chipper Shredder in a dry, protected place. If it is necessary to store the machine outside, after the DR 9.5 Chipper Shredder has cooled, cover the machine with a suitable protective cover that does not retain moisture. Do not use plastic as this material cannot breathe; it also allows condensation to form, which will cause your machine to rust.

Before performing any maintenance procedure or inspection, stop the Engine, wait five minutes to allow all parts to cool. Disconnect the Spark Plug Wire, keeping it away from the Spark Plug.
